

# RIBtype® rocker stamps for tough, big jobs

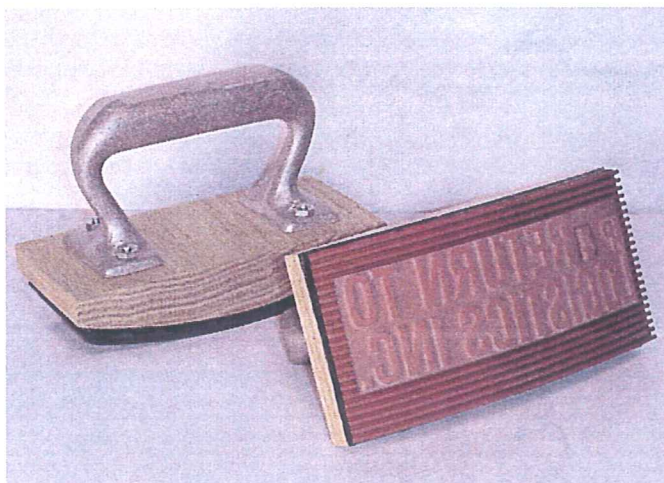

If you need to imprint a large area of text or are printing on an uneven surface, such as corrugated cartons, rocker stamps make a great impression. The RIBtype® interlocking rubber type system allows you to change dates, model numbers, lot numbers or other information quickly and easily.

All-aluminum mounts (left) are light-weight and durable. Sizes (width x rib length): 2" x 4-1/4", 4" x 4-1/4", 6" x 4-1/4", 7-7/8" x 4-1/4", 8" x 5-1/4".

## Wood mounts made of oak

Wood rocker mounts are made of sturdy red oak and come in five standard lengths: 3", 4", 5", 6" and 8".

These measurements refer to the length of the "ribs" in the curved direction. Wood rocker mounts can be custom made to any width.

The "G" aluminum handle is recommended for rocker stamps 2" x 5" or larger. This handle applies pressure over a larger area for better imprints. The handle is bolted to the wood mount and affords the user a firm, comfortable grip.

A wood knob handle is standard on rockers smaller than 2" x 5" and can be used on larger sizes.
